Web App related to AgroBusiness, called CeralSoft

- Microservices architecture in backend. .Net 6, SQLServer, EF, Dapr, Tye
- MVVM architecture in frontend. Blazor pages.

### PROJECTS

#### Building Barbecue Scheduling App

Developed a web application for condominium residents to reserve the community barbecue area online. The application allows users to select a date, view availability, make reservations and cancel them.

#### Law Firm Billing Management System

Created a system for a law firm to efficiently manage their billing. The system allows users to create invoices, record payments and generate reports.

#### Clothing Store Barcode Scanner App

Developed a mobile application that allows clothing store customers to scan product barcodes and view prices on their phones.

#### Suit Rental Reservation System

Developed a web application for suit rental stores to effectively manage their reservations, track suit availability, and monitor suit status.
